

Online clothing store

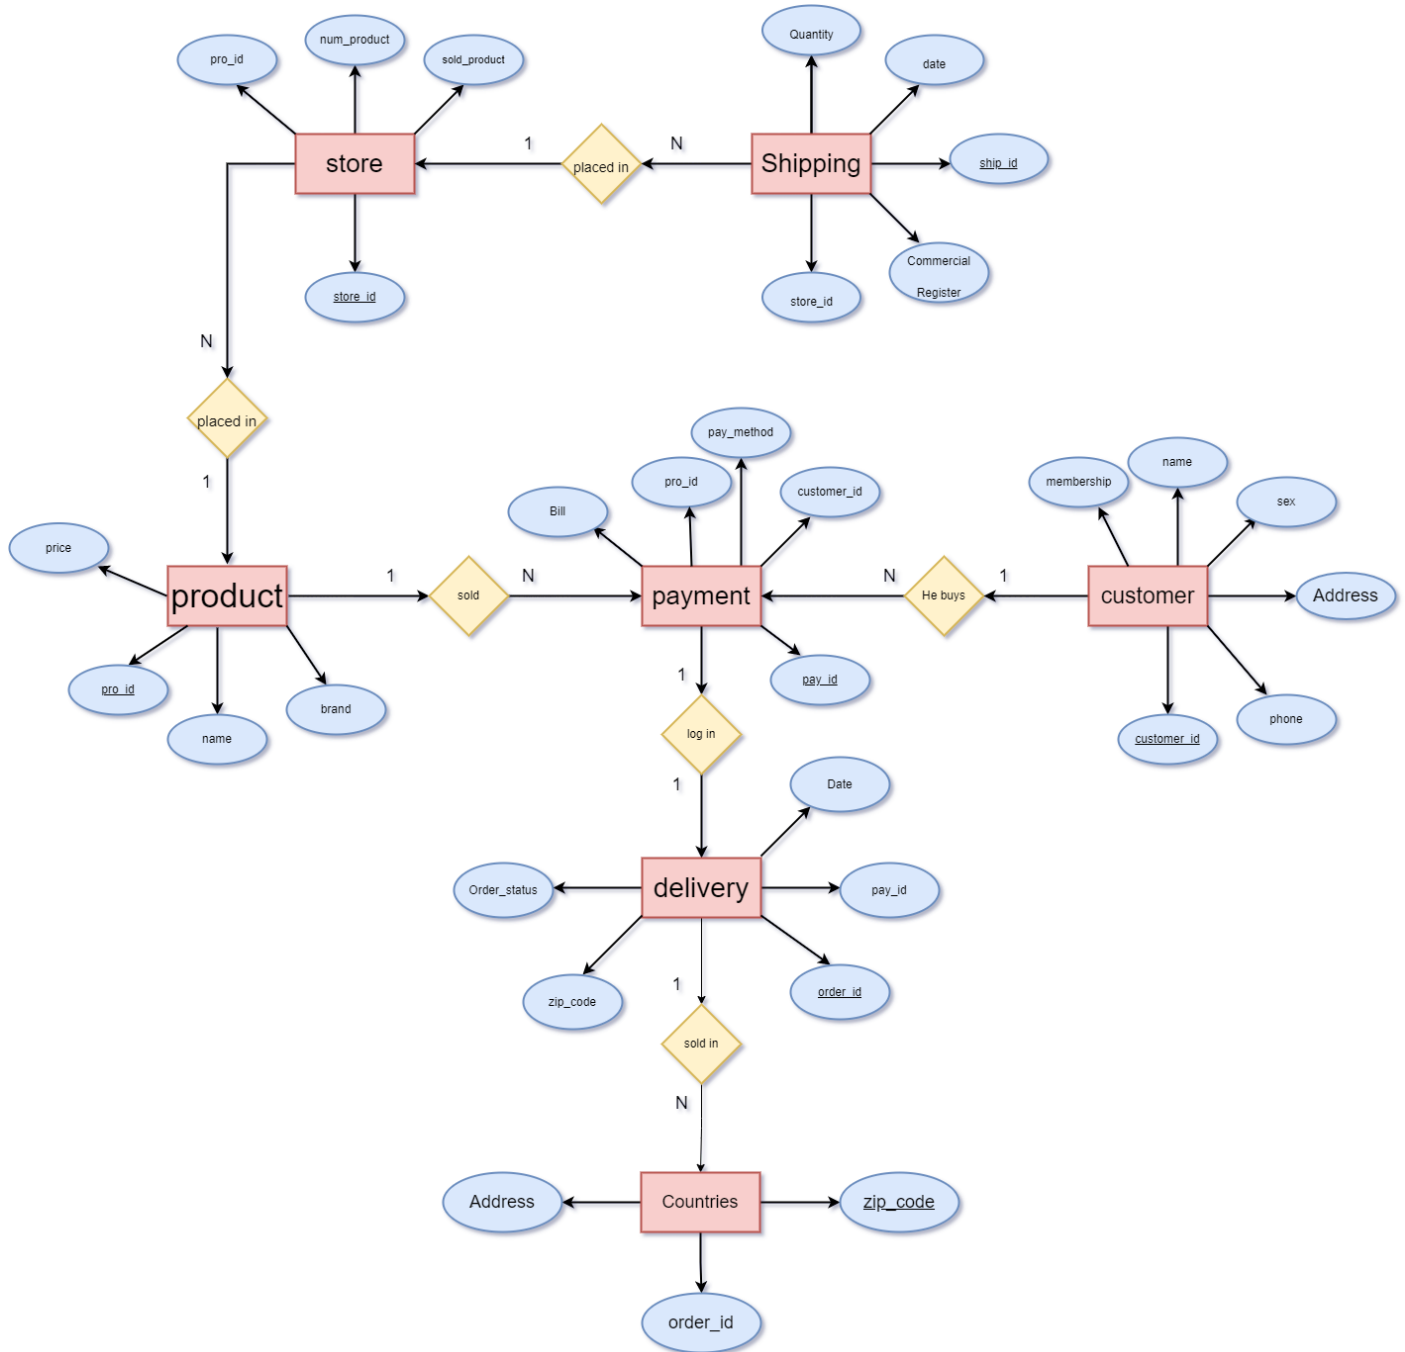

We have an online clothing store. Products are shipped and imported from abroad and stored in a warehouse according to the type and quantity of the product. Shipping can be done from more than one place to the same warehouse, then it is displayed according to the quantity in the store.

The store contains different quantities of clothes and brands of varying prices. The user can request more than one piece, and many users can also request the piece. Also, there may be a subscription for users that enables them to buy easily and use discounts, and the subscription period is for a period of one year, subject to renewal.

The user can have more than one invoice according to the type and quantity of the parts he purchased, and the purchase invoice is paid in the most appropriate way. There is a delivery service for orders and it includes many countries.
